The top and bottom of optical axis adjustment of headlamp

Halogen headlamp installation car

An optical axis of the headlamp (direction that light shines on) can be downward adjusted by spending the dial. -

Use it at the position of 0(0)(An optical axis is the most upward) usually.

Knowledge

About the top and bottom of optical axis adjustment

- Spend the dial when the front side of the vehicle face upes by putting luggage and the person, and the range that the headlamp shines on is different from always (It is more upward than usual) and make an optical axis of the headlamp downward. Return the dial to the position of 0(0) after selling luggage and the person wholesale. -

Adjust the following table according to the loading situation of the crew and the luggage room and adjust the dial position to the standard.

< standard at dial position >

Loading situation of crew and luggage room	Dial position
When only driver's seat gets on	0 0
When it gets on driver's seat and passenger's seat	1
At three person getting on of driver's seat, passenger's seat, and third seat	2
At 6 or 7 person getting on	3
When it gets on 6 or 7 people and luggage room is fully loaded	
When only driver's seat gets on and luggage room is fully loaded	4

- Go after adjusting the dial to the position of 0(0)(most upward position) when you adjust an optical axis by the car inspection etc.When

About the operation condition

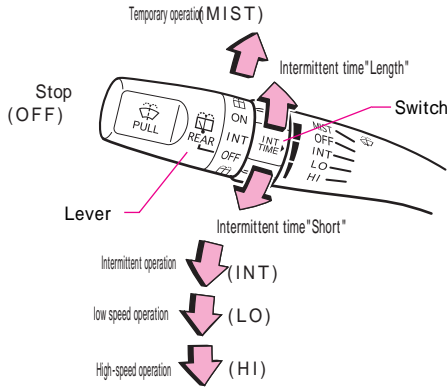

the headlamp lights, it is possible to use it.
